PRECAUTIONARY BOIL WATER ADVISORY

City of Martinsville Water Utility Customers
South of the Rogers Block Plant on SR 37 South ONLY:
Legendary Hills, Jordan Rd, Liberty Church and Liberty Loop Rd, Hinson Rd, Hacker
Creek Rd, Morgan County Rd, Brehob Ln, Pine Blvd, Old & New SR 37 South in this
area. Morgan/Monroe St Forest.

On Wednesday October 12, 2011 the City of Martinsville Water Utility will be doing
some work at the SR 37 Booster plant. In order to do the necessary work it will be
necessary to shut off the water supply that services your area.

A water line that supplies water service to your area has ruptured at the booster plant and
has to be repaired in order to continue water service to you. This process will be as
minimal as possible. Once the water service to your area has been restored it will become
necessary to issue a precautionary boil water advisory to you until we can sample and
have those samples analyzed by a state certified lab. We are recommending that you boil
all drinking water at a complete boil for 5 minutes before drinking until the samples are
returned to us from the lab in good condition, after the repairs are completed.

We will update you via WCBK and the Reporter-Times newspaper as to when it is no
longer necessary for you to boil any drinking water.

If you should have any questions or concerns please feel free to contact our utility office
at 765-342-2449.

Thank you,

City of Martinsville Water Utility
